With its fresh new look, the third edition of the Summit program helps develop confident English speakers who are able to navigate a host of social and professional situations. This two-level course provides high-intermediate learners with an integrated set of global communication skills. It delivers immediate, demonstrable results through its goal- and achievement-based pedagogy and continual recycling of language. The two levels of Summit can be used with Top Notch as the fifth and sixth books in a complete six-level series. Summit 1 covers competencies from B2 to B2+ and Summit 2 introduces C1 competencies in the Common European Framework of Reference. The entire Summit course can be tailored to blended learning with its integrated online component, MyEnglishLab (access code available separately; not included in the Student Book). Highlights New Conversation Activator videos build communicative competence. New Discussion Activator videos increase range and depth of expression. Test-taking Skills Booster and extra challenge exercises help students succeed on the reading and listening sections of standardized tests. Greatly increased grammar, reading, listening, and writing practice plus digital grammar exercises give students the additional practice opportunities they've requested. Memorable models build natural, social language and conversation strategies. 50+ listening tasks at each level develop critical thinking and crucial listening comprehension skills, such as listening for details, confirmation of content, inference, and understanding meaning. ActiveTeach includes a digital Student Book for whiteboards with lesson plans, assessment tools and access to audio, video, and exercises to make learning more focused and interactive. Fluency-building planning activities such as idea framing help students express themselves with confidence. More ready-to-use teacher resources (including a broad range of print and digital components) than other courses make Summit easy to use for busy teachers.

In the summer of 1967, twelve young men ascended Alaska's Mount McKinley—known to the locals as Denali. Engulfed by a once-in-a-lifetime blizzard, only five made it back down. Andy Hall, a journalist and son of the park superintendent at the time, was living in the park when the tragedy occurred and spent years tracking down rescuers, survivors, lost documents, and recordings of radio communications. In *Denali's Howl*, Hall reveals the full story of the expedition in a powerful retelling that will mesmerize the climbing community as well as anyone interested in mega-storms and man's sometimes deadly drive to challenge the forces of nature. This book offers the tools teachers need to get started with a more thoughtful and compelling approach to teaching history, one that develops literacy and higher-order thinking skills, connects the past to students' lives today, and meets social studies 3C standards and most state standards (grades 6–12). The author provides over 90 primary sources organized into seven thematic units, each structured around an essential question from world history. As students analyze carefully excerpted documents—including speeches by queens and rebels, ancient artifacts, and social media posts—they

build an understanding of how diverse historical figures have approached key issues. At the same time, students learn to participate in civic debates and develop their own views on what it means to be a 21st-century citizen of the world. Each unit connects to current events with dynamic classroom activities that make history come alive. In addition to the documents themselves, this teaching manual provides strategies to assess student learning; mini-lectures designed to introduce documents; activities and reproducibles to help students process, display, and integrate their learning; guidance to help teachers create their own units; guidelines for respectful student debate and discussion; and more. Book Features: A timely aid for secondary school teachers tasked with meeting standards and other state-level quality requirements. An approach that promotes student engagement and critical thinking to replace or augment a traditional textbook. Challenges to the “master narrative” of world history from figures like Queen Nzinga and Huda Sha’arawi, as well as traditionally recognized historical figures such as Pericles and Napoleon. Essential questions to help students explore seven of the most important recurring themes in world history. Role-plays and debates to promote interaction among students. Printable copies of the documents included in the book can be downloaded at [tccpress.com](http://tccpress.com). "This volume is a sampling of current scientific work about volcanoes in Central America with specific application to hazards. The papers reflect a variety of international and interdisciplinary collaborations and employ new methods. The book will be of interest to a broad cross section of scientists, especially volcanologists. The volume also will interest students who aspire to work in the field of volcano hazards mitigation or who may want to work in one of Earth's most volcanically active areas."--Publisher's website. Summit helps the high-intermediate learner continue to grow through a balanced development of both fluency and accuracy. Summit offers a unique conversational syllabus and extensive opportunities for discussion, debate, presentations, and projects as well as contextualized grammar review, expansion, and practice. Summit prepares students for academic study through development of word skills, reading and listening skills and strategies, and critical thinking. MyEnglishLab for Summit is a powerful online learning tool for personalized practice and assessment. This book provides a comprehensive description of the volcanological, petrological and geochemical features of the Poás Volcano (Costa Rica), one of the most active volcanic systems in Central America and part of the Central America Volcanic Arc (CAVA). Poás Volcano hosts a unique sulfur lake, which actually is one of the world's most acidic lakes, and has experienced molten sulfur eruptions. Past investigations, current monitoring activities and planned programs of investigation into lessening of the volcanic hazard are reported here. Specific sections of the monograph will be devoted to the impact of this volcano on the social, agricultural and industrial activities in the area. Legends and popular traditions related to this volcano will be described in the last chapter to round up a

complete scientific review on this unique volcanic system.
